HEALYNX AI

HEALYNX

CLOSING THE BLIND SPOT BETWEEN WHAT PATIENTS TAKE AND WHAT DOCTORS KNOW.

AI-powered preventive healthcare platform combining supplement intelligence with secure medical records.

NATIONAL DEEP TECH CHALLENGE 2026 • UNIVERSITI MALAYA • TRL 5 STATUS

Powered by 2 Universiti Malaya Patents
PI 2025007955 • UI 2025002953

The Clinical Blind Spot: 60% of GP Caseload is Chronic Disease

Meet Mr. Rajan

58 years old, Type 2 diabetes & hypertension. Takes 3 prescription meds and 4 supplements. His doctor knows almost nothing about the 4 supplements.

60%

of GP cases are chronic patients at risk

Fragmented Records

Medical histories are siloed across paper files and clinic-specific systems. No unified digital record exists for clinicians to review.

Undisclosed Risks

Patients routinely fail to disclose supplement use. High-risk drug-supplement interactions go undetected until harm occurs.

Reactive Care

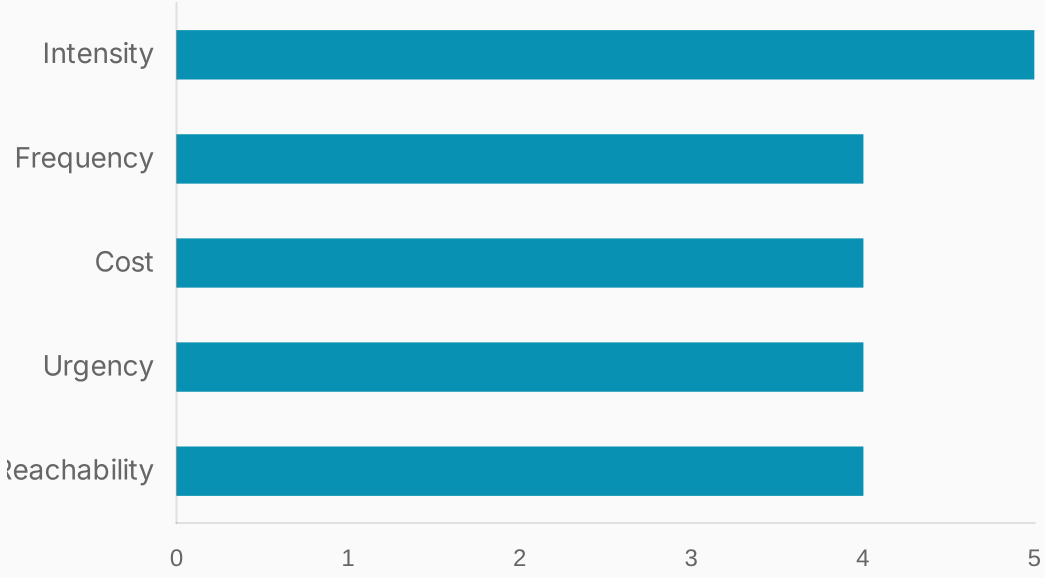
Existing tools focus on episodic treatment. No platform connects behavioral intake with clinical records for preventive intelligence.

15–20% of clinical consultation time is wasted on manual record review and gathering patient intake data.

Market Urgency: A 4.2/5 Pain Score Driven by Rising Trends

THE PAIN SCORE FRAMEWORK

4.2 / 5 Composite Score



Rapid Supplement Growth

Post-pandemic health consciousness is driving a surge in supplement consumption across all age groups in Malaysia.

Digital Health Mandates

MOH digitalization initiatives and EMR implementation mandates are creating the infrastructure for cloud-based platforms.

Chronic Disease Burden

Rising rates of diabetes and hypertension require integrated health records and real-time interaction monitoring.

Healynx: The First Integrated AI Preventive Healthcare Platform

Combining AI-driven supplement intelligence with secure, encrypted medical records management — enabling clinicians to detect hidden risks and patients to manage health proactively.

See what's missed

AI flags supplement-drug interactions that are currently invisible because patients don't disclose and systems don't check.

Secure what's scattered

Fragmented records become a unified, encrypted, AI-searchable patient history stored in Malaysian cloud regions.

Prevent what's predictable

Real-time risk scoring and personalized recommendations transform reactive treatment into proactive prevention.

TRUST & COMPLIANCE STANDARDS

- PDPA 2010 Compliant
- AES-256 Encryption
- Malaysian Data Residency
- RBAC Governance

The Closed-Loop System: 5 Steps to Preventive Care

STEP 01

Patient Intake

Patient completes a structured supplement survey via mobile. Captures dosages, frequency, and health history.

~3 Minute Survey

STEP 02

AI Analysis

Dual-engine processing detects drug-supplement interactions and evaluates patient risk variables.

≤3 Seconds Processing

STEP 03

Alerts & Insights

High-severity interaction alerts surface on the clinician's dashboard for immediate review.

10s Dashboard SLA

STEP 04

Secure Storage

Data is encrypted at rest and in transit, stored in Malaysian cloud regions with strict RBAC.

AES-256 Encryption

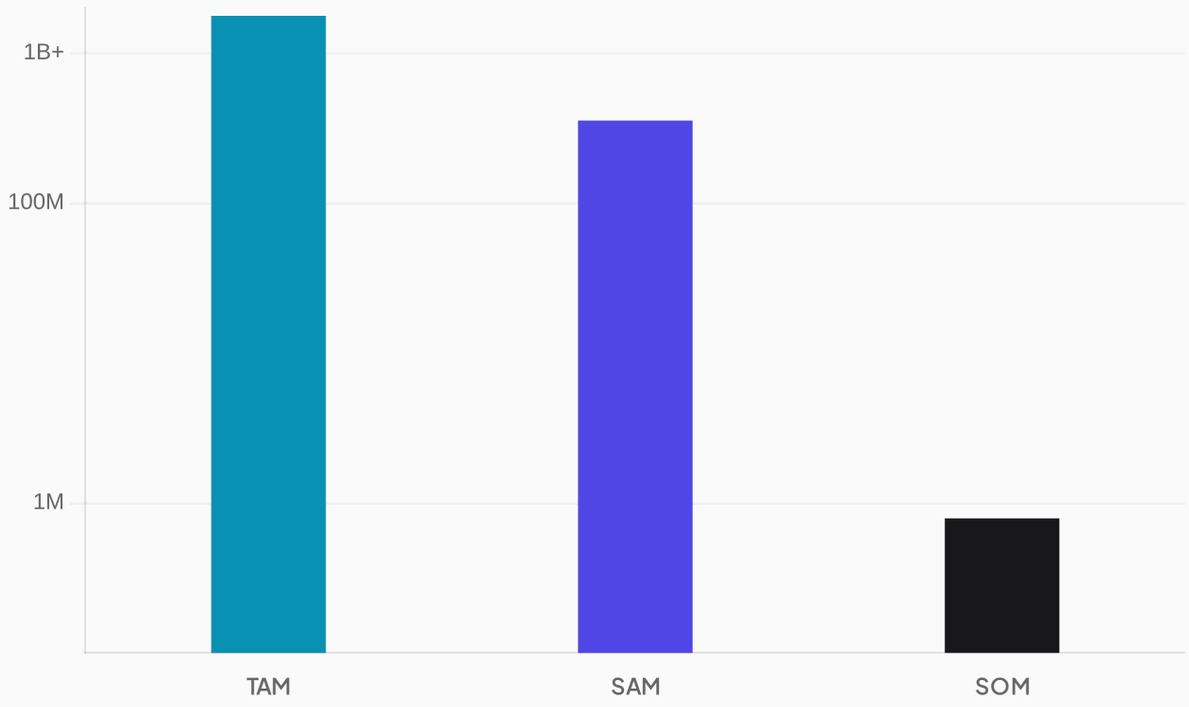
STEP 05

Clinical Action

Clinician discusses flagged risks. Patient receives personalized wellness scores and guidance.

Evidence-Linked

Market Opportunity: RM 1.75 Billion Total Addressable Market



TAM: TOTAL ADDRESSABLE MARKET

RM 1.75 Billion

Annual spend across private clinics, hospitals, telemedicine, corporate wellness, and insurance in Malaysia.

SAM: SERVICEABLE ADDRESSABLE MARKET

RM 350 Million

Focusing on 3,500 private clinics in urban hubs and 15 active telemedicine platforms.

SOM: SERVICEABLE OBTAINABLE MARKET

RM 780,000 ARR

Year 3 target: 98 accounts including 80 clinics, 5 multi-branch groups, and 2 telemedicine platforms.

ASEAN Expansion Potential

Scaling to Singapore, Indonesia, and Thailand adds a combined population of 670M+ to the addressable market by Year 4.

Game-Changing Features for Clinicians and Patients

AI Supplement Interaction Detection

Proprietary engine trained on expert-verified Malaysian clinical data. Detects drug-supplement and condition-contraindication risks in real-time with high sensitivity.

TARGET SENSITIVITY: ≥85% | ANALYSIS TIME: ≤3S

Secure Records Vault

AES-256 encrypted storage with AI-generated clinical summaries. Features time-limited sharing and emergency override with full audit trails.

PDPA COMPLIANT

Patient Wellness Score

Dynamic 0-100 score derived from safety profiles, medication adherence, and lifestyle factors. Visualizes health trends over time.

PROACTIVE MONITORING

Clinician Dashboard

Real-time WebSocket alerts for high-severity risks. AI chatbot allows natural-language queries of patient records and interaction data.

Execution Roadmap: From Pilot to Commercial Scale

PHASE 1

Clinical Validation

Months 1 – 9

Focus on AI accuracy benchmarking and UX iteration with early adopters.

- Pilot with UM Medical Centre
- Target ≥85% AI Sensitivity
- 5 Pilot Sites / 200+ Patients

PHASE 2

Strategic Partnerships

Months 6 – 18

Integration with existing healthcare ecosystems and digital platforms.

- Telemedicine API Integrations
- Pharmacy Chain Partnerships
- 15 Paying Accounts / RM 5K MRR

PHASE 3

Commercial Launch

Months 15 – 24

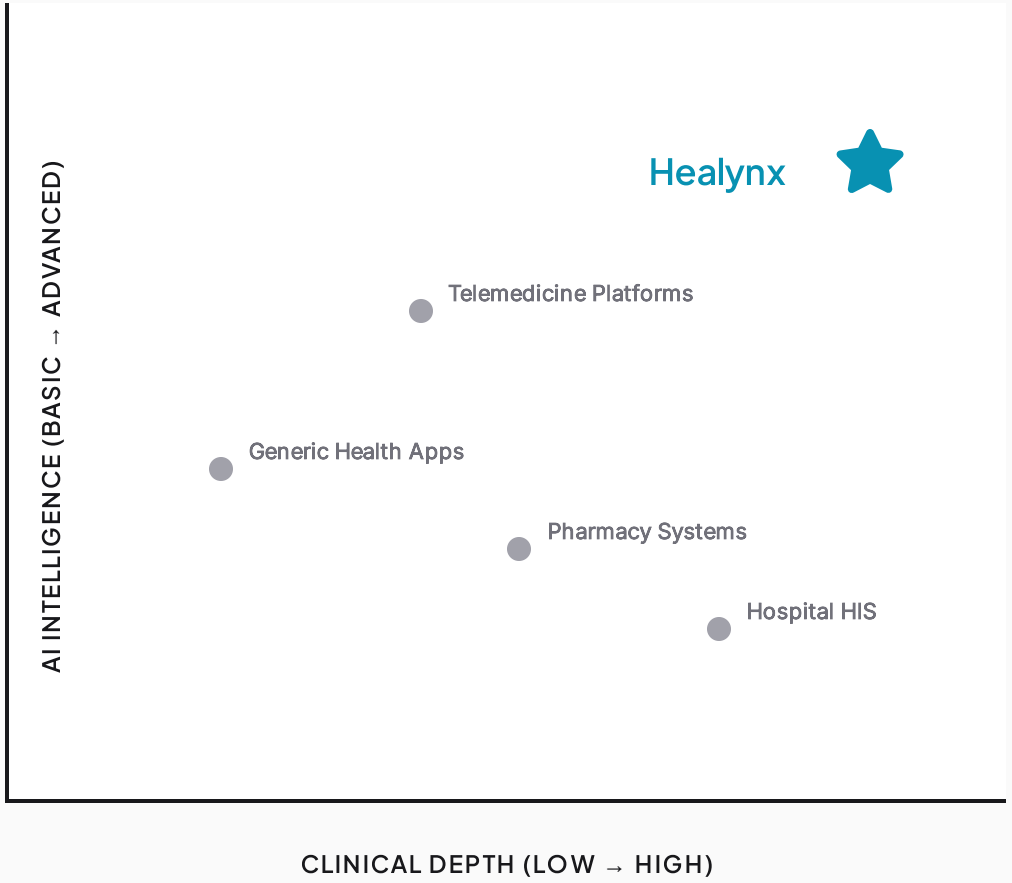
Full-scale market entry and expansion across Malaysia.

- B2B Sales Team Expansion
- 40+ Active Accounts
- Target RM 32K MRR

BOOTSTRAP CONTINGENCY

If seed funding is delayed, Healynx will execute a **Plan B**: Leveraging RM 200K–500K in government grants (MDEC, CREST) and partner-funded development. This ensures **0% dilution** while reaching the same product milestones 6–12 months later.

Competitive Landscape: The Only Platform at the Intersection



Telemedicine Platforms

Focus on episodic consultations. Lack longitudinal records and AI-driven supplement safety analysis.

HEALYNX: LONGITUDINAL + AI SAFETY

Generic Health Apps

Consumer-grade tracking. Not medical-grade, weak security, and no clinician integration.

HEALYNX: MEDICAL-GRADE + PDPA

Hospital HIS

Heavy, expensive legacy systems. Not designed for the clinic/wellness segment or supplement intelligence.

HEALYNX: LIGHTWEIGHT + CLOUD-NATIVE

The Healynx Advantage

The only platform combining AI supplement safety, secure records, and preventive analytics in a PDPA-compliant SaaS.

Investment Ask: RM 1.5M – 2.5M to Close the Blind Spot

The Intelligence Backbone for Preventive Healthcare in ASEAN

We are building the regional infrastructure that connects patients, providers, and payers through AI-powered safety and secure longitudinal records.

Join us in building Malaysia's first AI preventive healthcare backbone.

Bootstrap contingency: Plan B via grants & partner pre-commitments secured.

See what's missed. Secure what's scattered. Prevent what's predictable.

HEALYNX AI

To become the regional AI preventive healthcare intelligence infrastructure — making preventive healthcare data-driven, personalized, and accessible to all.

HEALTHCARE'S FUTURE ISN'T COMING — IT'S ALREADY HERE.
