CLOSING THE BLIND SPOT BETWEEN WHAT PATIENTS TAKE AND WHAT DOCTORS KNOW.

NATIONAL DEEP TECH CHALLENGE 2026 • UNIVERSITI MALAYA • TRL 5 STATUS

Powered by 2 Universiti Malaya Patents
PI 2025007955 • UI 2025002953

The Clinical Blind Spot: 60% of GP Caseload is Chronic Disease

Meet Mr. Rajan

58 years old, Type 2 diabetes & hypertension. Takes 3 prescription meds and 4 supplements. His doctor knows almost nothing about the 4 supplements.

60%

of GP cases are chronic patients at risk

Fragmented Records

Medical histories are siloed across paper files and clinic-specific systems. No unified digital record exists for clinicians to review.

Undisclosed Risks

Patients routinely fail to disclose supplement use. High-risk drug-supplement interactions go undetected until harm occurs.

Reactive Care

Existing tools focus on episodic treatment. No platform connects behavioral intake with clinical records for preventive intelligence.

15 – 20%

of clinical consultation time is wasted on manual record review and gathering patient intake data.

Why Now: Preventive Healthcare is Reaching an Inflection Point

Rising Supplement Consumption

Post-pandemic health awareness has accelerated supplement usage. Patients consume supplements without clinician visibility, creating hidden risks for interactions and incomplete assessments.

National Healthcare Digitalisation

Malaysia is accelerating digital transformation through EMR adoption and digital health initiatives, creating the infrastructure foundation for cloud-native preventive platforms.

Growing Chronic Disease Burden

The increasing prevalence of diabetes and hypertension raises the risk of adverse interactions. Preventive monitoring and longitudinal records are becoming critical.

Demand for Secure Unified Records

Providers require PDPA-compliant systems that securely unify fragmented patient records while enabling real-time access and AI-assisted insights.

KEY MARKET SIGNALS

- ✓ Rising Awareness
- ✓ Self-Medication Trends
- ✓ Digital Push
- ✓ Record Unification
- ✓ AI Decision Support

Healynx: The First Integrated AI Preventive Healthcare Platform

Combining AI-driven supplement intelligence with secure, encrypted medical records management — enabling clinicians to detect hidden risks and patients to manage health proactively.

See what's missed

AI flags supplement-drug interactions that are currently invisible because patients don't disclose and systems don't check.

Secure what's scattered

Fragmented records become a unified, encrypted, AI-searchable patient history stored in Malaysian cloud regions.

Prevent what's predictable

Real-time risk scoring and personalized recommendations transform reactive treatment into proactive prevention.

TRUST & COMPLIANCE STANDARDS

- PDPA 2010 Compliant
- AES-256 Encryption
- Malaysian Data Residency
- RBAC Governance

The Closed-Loop System: 5 Steps to Preventive Care

STEP 01

Patient Intake

Patient completes a structured supplement survey via mobile. Captures dosages, frequency, and health history.

~3 Minute Survey

STEP 02

AI Analysis

Dual-engine processing detects drug-supplement interactions and evaluates patient risk variables.

≤3 Seconds Processing

STEP 03

Alerts & Insights

High-severity interaction alerts surface on the clinician's dashboard for immediate review.

10s Dashboard SLA

STEP 04

Secure Storage

Data is encrypted at rest and in transit, stored in Malaysian cloud regions with strict RBAC.

AES-256 Encryption

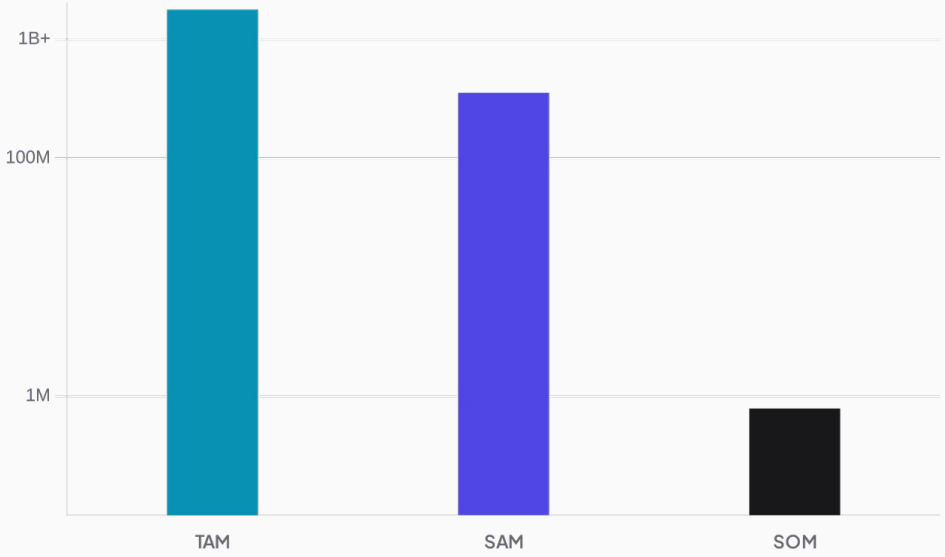
STEP 05

Clinical Action

Clinician discusses flagged risks. Patient receives personalized wellness scores and guidance.

Evidence-Linked

Market Opportunity: RM 1.75 Billion Total Addressable Market



TAM: TOTAL ADDRESSABLE MARKET

RM 1.75 Billion

Annual spend across private clinics, hospitals, telemedicine, corporate wellness, and insurance in Malaysia.

SAM: SERVICEABLE ADDRESSABLE MARKET

RM 350 Million

Focusing on 3,500 private clinics in urban hubs and 15 active telemedicine platforms.

SOM: SERVICEABLE OBTAINABLE MARKET

RM 780,000 ARR

Year 3 target: 98 accounts including 80 clinics, 5 multi-branch groups **(Enterprise Group Tier)**, and 2 telemedicine platforms **(High-Volume API Tier)**.

ASEAN Expansion Potential

Scaling to Singapore, Indonesia, and Thailand adds a combined population of 670M+ to the addressable market by Year 4.

Game-Changing Features for Clinicians and Patients

AI Supplement Interaction Detection

Proprietary engine trained on expert-verified Malaysian clinical data. Detects drug-supplement and condition-contraindication risks in real-time with high sensitivity.

TARGET SENSITIVITY: ≥85% | ANALYSIS TIME: ≤3S

Secure Records Vault

AES-256 encrypted storage with AI-generated clinical summaries. Features time-limited sharing and emergency override with full audit trails.

PDPA COMPLAINT

Patient Wellness Score

Dynamic 0-100 score derived from safety profiles, medication adherence, and lifestyle factors. Visualizes health trends over time.

PROACTIVE MONITORING

Clinician Dashboard

Real-time WebSocket alerts for high-severity risks. AI chatbot allows natural-language queries of patient records and interaction data.

Technology Moat: Protected by 2 UM Patents and Proprietary Data

IP PROTECTION

PI 2025007955

Secure Medical Records Management in AI-Enhanced Systems (TRL 5)

UI 2025002953

Interactive Patient Supplement Intake Assessment Method (TRL 3)

Both IPs are exclusively licensed from Universiti Malaya, providing a legal barrier to entry for competitors.

DATA & AI MOAT

Proprietary Dataset

Expert-labeled Malaysian supplement interaction dataset. Years of clinical data collection that is hard to replicate.

AI Pipeline

BART-large fine-tuned for clinical summarization. Neo4j graph engine for complex interaction detection.

Neo4j | Mistral 7B | RAG | ONNX

SECURITY & INFRASTRUCTURE

Secure Architecture

Cloud-native AWS Malaysia residency. AES-256-GCM envelope encryption with KMS key rotation.

Compliance

PDPA 2010 compliant. ISO 27001 aligned. Immutable audit trails for all clinical data access.

AES-256 | TLS 1.3 | RBAC | KMS

Business Model: Scalable B2B SaaS & API Licensing

REVENUE MIX (STEADY STATE)

Clinic Subscriptions	55%
API Licensing	15%
Corporate Wellness	15%
Customization & Data	15%

Target: RM 780,000 ARR (Year 3)

75%+

High-margin recurring revenue model with low churn potential.

Execution Roadmap: From Pilot to Commercial Scale

PHASE 1

Clinical Validation

Months 1 – 9

- Pilot with UM Medical Centre
- Target ≥85% AI Sensitivity
- 5 Pilot Sites / 200+ Patients

PHASE 2

Strategic Partnerships

Months 6 – 18

- Telemedicine API Integrations
- Pharmacy Chain Partnerships
- 15 Accounts / RM 5K MRR

PHASE 3

Commercial Launch

Months 15 – 24

- B2B Sales Team Expansion
- 40+ Active Accounts
- Target RM 32K MRR

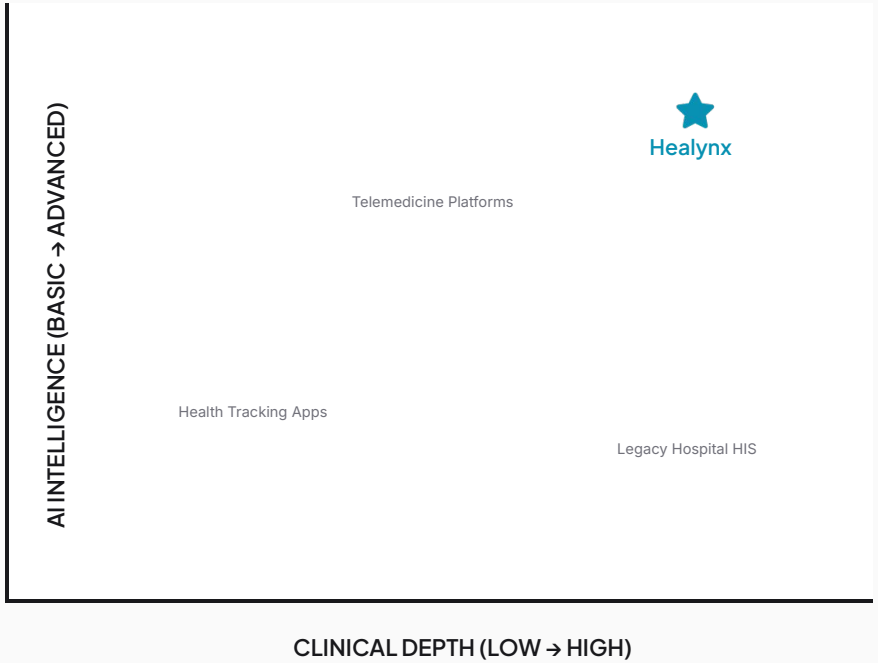
CAPITAL FLEXIBILITY

Strategic Capital Flexibility

- Innovation Grants (MDEC, CREST)
- Strategic Partnerships
- Phased Commercialization

If institutional funding timelines extend, Healynx will continue execution through these alternative channels. This enables **continued product validation** and pilot expansion while **preserving capital efficiency** and operational momentum.

Competitive Landscape: The Only Platform at the Intersection



Telemedicine Platforms

Focus on episodic care. Lack longitudinal records and AI-driven supplement safety analysis.

HEALYNX: LONGITUDINAL + AI SAFETY

Generic Health Apps

Consumer-grade tracking. Not medical-grade, weak security, and no clinician integration.

HEALYNX: MEDICAL-GRADE + PDPA

Legacy Hospital HIS

Expensive systems. Not designed for the clinic segment or proactive supplement intelligence.

HEALYNX: LIGHTWEIGHT + CLOUD-NATIVE

The Healynx Edge

The only platform combining AI supplement safety, secure records, and preventive analytics in a PDPA-compliant SaaS.
